

Examples for Regula False

1. Use Regula False method and find 3 intervals for $f(x) = \sqrt{x} - \cos x$ on $[0, 1]$

2. Use Regula False method and find 3 intervals for $3x - e^x = 0$ on $[0, 1]$

3. Use the Regula Falsi method to find x_2 ve x_3 for $e^x + 2^{-x} + 2\cos x - 6 = 0$ on $[1,2]$

Solution:

4. Solve the equation given in q3 with 10^{-3} accuracy.

5. Use the Regula Falsi method to find x_2 ve x_3 for $\sin(2x) - e^{x-1} = 0$ Use $x_0 = 0.5$ ve $x_1 = 1$.

6. Solve the equation given in q5 with 10^{-3} accuracy.
