

Examples for Bisection Method

- 1) Let $xe^{-x} + x^3 + 1 = 0$ on $[-1,0]$
 - a) Use bisection method and perform three iterations.
 - b) Solve the question with 10^{-3} accuracy.
 - c) How many bisections needed to achieve 10^{-6} accuracy.

2) Use Bisection method and find 3 intervals for $f(x) = \sqrt{x} - \cos x$ on $[0, 1]$
